Dear Hiring Manager,

I'm excited to be applying for the student developer position. As someone who is highly focused and attentive to detail, I thrive to learn new things and build products that surpass end-users expectations. I'm thrilled at the opportunity to show off my technical expertise. During my previous Internship at Tatum Games, I have worked with Unity C#, RestAPI's, AWS, and GCP. I enjoyed my internship and learnt a lot new things while developing the game.

I always wanted to work on a project with virtual and augmented reality but never got a chance. I have very little experience working with AR/VR but I'm ready to spend more of my own time to learn new things that are required for the job based on specifications.

I am currently working as an undergraduate teaching assistant for CS354(Programming in C). I love to help people and I enjoy the feeling when someone learns something new from me. I have been selected this position based on my proficiency in the subject and passion to help other students.

I also do Competitive programming, I very often solve problems on online coding platforms like codeforces and CodeChef which requires advanced concepts of data structures and algorithms.

I'm looking forward to learning more details about the position. I'm excited about the opportunity to leverage my unique range of skills.

Thanks for the time and consideration.

Sincerely,

Sai Teja.
